Overview: Where science and religion conflict

Respondents who have no religious affiliation are the most likely to think that science and religion, in general, are often in conflict. But just one-in-six religiously unaffiliated adults 16% say their own religious beliefs conflict with science. Although mechanistic philosophy was strongly attacked by many Anglican theological writers and poets of the eighteenth century, the teleological argument for the existence of God remained popular, receiving influential expression in the work of the philosopher 1743 —1805 , an Anglican priest, and author of a standard textbook, Natural History 1802. Most commonly, the God of the gaps argument suggests that for each phenomenon as yet unexplained by science, the possibility exists that a god is hiding somewhere in that vacuum of knowledge and that this god is ultimately responsible for those unexplained occurrences. Arguments among scientists exist at the frontiers of each area of science, where new discoveries are being interpreted and hotly debated. They hold diverse and often conflicting beliefs concerning deity, humanity and the rest of the universe.
