Regional assessment of wetland plant communities using the index of plant community integrity

Very few experiments and analyses have been designed to investigate the relative impacts of climate and land-use change drivers. Methane CH₄ emissions from natural wetlands comprise about a quarter of the total annual atmospheric CH₄ budget.

Indicators of Wetland Condition for the Prairie Pothole Region of the United States

This region is famous as the producer of at least half of North America's waterfowl and an unknown, but large, proportion of other prairie-dwelling marsh and aquatic birds. Superimposed on these phenomena are the effects of a variety of land uses, including pasture, cultivation, mechanical forage removal, idle conditions and burning. Davies, Nancy Ockendon, Nathalie Pettorelli, and Juliet A.
