Nanotechnology

Stimulated emission can be produced when the process is continued and further generate light with the same phase, coherence and wavelength.

Hoff, Ted

And the way the ah. In October 1961, they demonstrated efficient light emission and signal coupling between a GaAs p-n junction light emitter and an electrically isolated semiconductor photodetector. Unfortunately for TI, this chip never worked as expected and was never marketed.

Hoff, Ted

. In 1985, he received TI's Innovation Award for his contribution to the design and development of Schottky Logic. Biard serving as Vice President of the Spectronics Research and Development Division 1976.

US3206730A

. I wrote a letter up the line at the time to that effect, but it apparently didn't stir up matters.
