Barley: Classes and varieties

Orientations and perspectives for the coming barley crop: Early indications on forecasts of varietal evolutions under way from Jean-Michel Oustrain, in charge of Varietal Development for Malteurop Groupe. Western Europe is at the leading edge of innovation for varieties of malting barley. At less than 43 pounds per bushel weight, gains and efficiency are severely affected.

Malteurop accompanies its brewer customers with testing and pilots using the malts derived from these new barley varieties. However, grains contaminated with DON often are contaminated with other mycotoxins encompassing a wide range of compounds. This year saw the first sowings of the varieties Pixel and KWS Faro, which are interesting both in terms of agronomic yield and brewing quality, with a significant gain in extract levels.

Brewing Barley 2019: Initial Trends

Appropriate preparations for high-volume processing and storage are needed to facilitate rolling or grinding and storage of grain being harvested. Grown in temperate regions of the world, barley is more tolerant to drought and saline soils than other cereal grains.

Types of Barley

Forage intake decreased when barley was fed at 5. Bushel weight or other quality characteristics may be more useful in assessing feeding value than relying on variety alone.

Brewing Barley 2019: Initial Trends

Regardless of the variety, making sure farmers are able to continue growing high-quality barley is equally important.
