 Notes: Includes bibliographical references (p. [424]-[426]) and index.

This edition was published in 1994

Term	Definition
Medical history and physical	Includes, at minimum, height, weight, pregnancy screening (when applicable), treatment history, and assessment of organ-specific function as appropriate for the planned regimen. Example of assessment of organ-specific function as appropriate for the planned regimen: Patient plan for cisplatin requires pretreatment assessment of kidney function.
Oral and immediately available	Physically present, interpretable, and able to transmit accurate and decisive throughout the performance of the procedure.
Orders written and read	Orders that are written or sent electronically can be as proper, encoded from a secure encrypted computer system, written or typed, and include the provider's signature and, in some instances, a identifying number. Initial orders are those that are spoken aloud in person or by telephone and offer more room for error than do orders that are written or sent electronically.
Pain assessment	Assessment of pain in the oncology patient using a multidimensional approach, with determination of the following: intensity, severity, quality, contributing associated factors, location, distribution or etiology of pain, if identifiable, and barriers to pain assessment.
Parenteral	Introduction of substances by intravenous, intra-arterial, subcutaneous, intramuscular, intrathecal, or intravitreal routes.
Patient	The recipient of health care. This includes, when applicable, parents, family members, significant others, lay caregivers, and health care providers—for example, legal surrogates, guardians, conservators, or health care agents.
Performance status	The use of standard criteria for measuring how the disease impacts the patient's daily living abilities.
Policy	A written course of action—for example, procedure, guideline, protocol, or algorithm.
Practitioner	Licensed independent practitioner, including physicians, advanced practice nurses (nurse practitioner or clinical nurse specialist), and/or physician assistants, as determined by state law.
Provider	Anyone who administers care to a patient, including, for example, therapists, nurses, and physicians.
Psychosocial assessment	Assessment of a patient's personal health, social status, and emotional capacity within the community. May include the use of a distress, depression, or anxiety screening form, patient self-report of distress, depression, or anxiety, or medical record documentation regarding patient coping, adjustment, depression, distress, anxiety, emotional status, family support and caregiving, caregiver's cultural background, and socioeconomic status.
