Outdoor Safety Tips for Children

Keep your child out of rooms where there are hot objects that may be touched or put a barrier around them. It actually costs less to join than buying products separately! Diaper Trouble: Diaper rashes often occur due to skin irritation due to wet diaper left on for too long, too-tight diapers or due to the use of a specific soap, wipes or a diaper. The wood and glue can warp or become brittle, too, which can set the stage for joint or slat failures down the road — potentially while your little one is sleeping.

Safety for Your Child: 1 to 2 Years

There are many measures you must take to protect your child from injury or accident in the house. Keep things where they can be comfortably reached, or use a ladder or step-stool to safely retrieve them, and keep drawers, cabinets and cupboards closed when not in use.

Toddler Safety Tips

Talk to your child using simple language, and without trying to scare them. Children learn quickly how to roll over and can fall off the moment you turn away looking for a diaper.

Baby Safety Tips

For babies under 1 year of age, falls cause more than half of non-fatal injuries.
