Poland Economy

The new energy technology sector may create 300 thousand new jobs in Poland. We are looking at five selected trends - important and current ones.

Poland Economy

The trade-weighted average tariff rate common among EU members is 3 percent, with 639 EU-mandated nontariff measures in force. So if you do not agree with our assessment of the necessity of processing your data or if you have other reservations in this regard, be sure to submit an objection or send us your objections to the address odo@ptwp.pl.

5 trends that will shape economic development in Poland in 2018 and beyond

Real wage growth and a range of demographically targeted social programs led to robust consumption growth until early 2020. And suddenly the lockdown changed everything in March. Employers are also becoming more amenable to flexible working hours and part-time contracts in order to secure the right talent.

Economic and political outline Poland

The overall tax burden equals 35. Total employment data correspond to those reported in national accounts. The country is relatively rich in natural resources and the main minerals produced are coal, sulphur, copper, lead and zinc.

Economic and political outline Poland

Moreover, this is yet another trend which became very apparent at the 12th European Economic Congress. Polish power generation is decapitalising, and coal reserves are depleting, and the pressure of the EU on decarbonisation is far from weakening.
