SVS solicits comments on clinical practice guidelines covering carotid disease

Pregnancy may be a risk factor in women presenting with aortic dissection before the age of 40. Arteriosclerosis can have different causes, including blood vessel calcification more common in older people , but is most commonly due to atherosclerosis.

Altmetric

Comparative determinants of 4-year cardiovascular event rates in stable outpatients at risk of or with atherothrombosis. The number of portal tracts varies; sometimes abundant portal tracts are present Fig.

Pulmonary Vascular Disease

The SVS seeks comments for an update to clinical practice guidelines on extracranial cerebrovascular disease The Society for Vascular Surgery SVS is seeking comments by Feb. It is organized as the three parts.

Curriculum

Circulation Research; 116: 9, 1540-1550. Future research should focus on specific subpopulations to tease out the impact of PVD screening on outcomes for both quality of life and mortality. Monocytes are immune cells that survey the integrity of the endothelium.

Clinical Practice Guidelines

The thrombus causes acute ischaemia, which, if left untreated, can lead to myocardial cell necrosis and MI involving either the whole thickness of the heart muscle ST elevation MI or only part of the cardiac wall non-ST elevation MI.
