Handbook of Carbon, Graphite, Diamond and Fullerenes... (0815513399) by Pierson, Hugh O.

Uses of diamond include cutting, drilling, and grinding; jewelry; and in the semi-conductor industry. Some are very old charcoal, others new the fullerenes. CO₂ is an end product of the metabolism of organisms via the cellular respiration process, in which energy is obtained from the breaking down of sugars, fats, and amino acids.

Handbook of carbon, graphite, diamond and fullerenes 1993 pierson

This field has expanded greatly in the last three decades stimulated by many major discoveries such as carbon fibers, low-pressure diamond and the fullerenes. Highly strong construction materials may be obtained by bulk compression of fullerene condensates... Properties of Diamond and Diamond Polytypes 244 1.

Handbook of Carbon, Graphite, Diamonds and Fullerenes. Processing, Properties and Applications

These carbon materials are very different in structure and properties.

Types of Carbides Carbides are compounds composed of carbon and less electronegative elements and they are distinguished by their chemical bonding ionic, covalent.

Moreover these studies were written several decades ago and are generally outdated since the development of the technology is moving very rapidly

and scope of applications is constantly expanding and reaching into new fields such as aerospace, automotive, semiconductors, optics, and electronics.

Fundamental Structural, Electronic, and Chemical Properties of Carbon Nanostructures: Graphene, Fullerenes, Carbon Nanotubes, and Their Derivatives

This book is a review of the science and technology of the element carbon and its allotropes: graphite, diamond and the fullerenes. It is an allotrope of carbon whose structure is a single planar sheet of sp^2 bonded carbon atoms that are densely packed in a honeycomb crystal lattice.
