Overall, the editors did a splendid job in presenting the breadth and depth of this exciting field. However, as people move away from a culture based on the traditional use of the surrounding plants and animals to one based on imported goods, they lose a valuable part of their tradition. Before accepting the directorship of WLBC, he held academic appointments as Research Fellow in Geography and the Environment at the University of Texas at Austin from 2006 to 2007, as Associate Professor of Botany and Scientific Director of Harold Lyon Arboretum at the University of Hawaii from 2003 to 2006, and as Assistant Professor at the University of Bayreuth from 1997 to 2003, following a postdoc at the same institution from 1994 to 1997.

Ethnobotany: Evolution of a Discipline by Richard Evans Schultes

Published on the 100th anniversary of the science of ethnobotany, this volume provides a comprehensive summary of the history and current state of the field. Southeast Asia's banana so transformed Central American republics that their economies now rely on this fruit for their survival, and South America's pineapple changed Hawaii from a sleepy, exotic way station to an outpost of hard-driving enterprise from which it has never recovered. This volume, therefore, can be seen as a kind of prehistory that tells much about our past, but also much about our present and future.
