

Water management and sediment control for urbanizing areas

Dept. of Agriculture, Soil Conservation Service - Best Management Practices (BMPs)

Description: -

-
Water quality management -- United States
Sedimentation and deposition
Water management and sediment control for urbanizing areas
-Water management and sediment control for urbanizing areas
Notes: Issued June 1978
This edition was published in 1972

Compared to high-order network streams, zero-order streams are disproportionately disturbed by mass grading, enclosure, or channelization Gomi et al. Economic and environmental principles and guidelines for water and related land resources implementation studies, Circular No. Physical markers, such as tape, signs, or barriers, indicating the limits of land disturbance, can ensure that equipment operators know the proposed limits of clearing.

Water management and sediment control for urbanizing areas

Some SCMs are useful at all scales, such as product substitution and impervious cover minimization. What is possible is to describe their basic hydrologic and water quality objectives and make a general comparative assessment of what is known about their design, performance, and maintenance as of mid-2008.

EGLE

An impact fee is a one-time charge levied on new development.

Water Management & Sediment Control Regulations

However, it presumes that there will be some water quality benefits in receiving waters; that is, phosphorus and fecal coliform might be captured by the TSS requirement. Redevelopment of Existing Areas Redevelopment within established communities is typically at the scale of individual sites and occasionally the scale of a small district. Finally, there is concern that there is inadequate funding to maintain the growing number of SCMs on the landscape.

EGLE

Samples collected from storm sewer pipes and urban streams in the Menomonee River watershed in the late 1970s clearly showed the

concentrations of many pollutants, such as heavy metals and sediment, were elevated in urban runoff Bannerman et al. In addition to fees or taxes, exactions such as impact fees can also be used as a way to finance municipal stormwater infrastructure investments Debo and Reese, 2003. In such a case, it might be sound water quality policy to accept higher levels of impervious surface in targeted locations, more stormwater-related impacts, and less ambitious designated uses in urban watersheds in order to preserve and protect designated uses in other watersheds.
