Using Projective Testing Measures

Analog instruments are based on the concept of stereo metric vision.

HISTORY OF PHOTOGRAMMETRY

We propose a surface segmentation method based on Fast Marching Farthest Point Sampling designed for noisy, visually reconstructed point clouds or laser range data. Especially, finding circular and elliptical structures in images is relevant in many applications.

Concepts Of Photogrammetry

In the present study a high-throughput image interpretation tool was developed to acquire automatically number, size, and volume of grape berries from RGB red-green-blue images. Automatic building extraction from remotely sensed images is a research topic much more significant than ever. In this paper we show how we apply our system for visual odometry using the synchronized video streams of the four fisheye cameras.

Historical Development of Photogrammetry

In addition, we investigated the potential of contextual classification with the so called conditional random field method, which seemed to eliminate the typical errors of pixelwise classification. The 3D points are classified to different parts of the model i.
