5 The Ethical Framework for Research Involving Prisoners

These services and the roles and responsibilities of each agency are detailed in a two-page MOU that both agencies have signed provided in Resources below. The predominant reason for placement in voluntary segregation was for the woman's personal safety 92.

Psychological assessment of risk in a county jail: implications for reentry, recidivism and detention practices in the USA

That is, despite a consistent and significant drop in crime across the USA, 95 percent of the increase in jail incarceration rates since 2000 was due to the sizable growth in the number of individuals in jail awaiting trial, many unable to pay bail. The rates of mental health problems in the sample were two to three times greater than the general population. Overall, the length of the segregation period was similar across regions.

Bureau of Justice Statistics (BJS)

In particular, Congress directed the commission to attend to three components of informed consent: 1 nature of the consent; 2 adequacy of the information given; and 3 competence and freedom of the prisoners or their legal representatives to make a choice. These findings indicate that the segregated women are less likely to be released early, and less likely to be successful upon their release as indicated by multiple readmissions than non-segregated women.

Psychological assessment of risk in a county jail: implications for reentry, recidivism and detention practices in the USA

Respect for persons requires that research subjects be treated as autonomous individuals. Further, individuals with mental health disorders and neurodisability have a significantly higher risk for multiple incarcerations and recidivism ; , are more likely to be charged with rules violations while incarcerated ; , and have a substantially decreased time between incarcerations. Ottawa, ON: Correctional Service of Canada.

Bureau of Justice Statistics (BJS)

However, voluntary administrative segregation accounted for one third of the segregation use in the Ontario region, yet disciplinary segregation was almost never used.

Bureau of Justice Statistics (BJS)

One question the editors raise is whether research ethics has been too concerned with informed consent to the neglect of other matters. As a whole, extant data on jails and short-term detention facilities indicate that research in these settings is integral to any effort to address issues of mass incarceration and recidivism. The commission linked this dilemma to the principle of justice, specified as the fair treatment of persons and groups.
