If possible, a sunroom is the optimum location for indoor citrus during the winter. Includes oranges, lemons, limes, tangerines, clementines, and many more. A good home-made growing media mix for Citrus would be: 4 parts shredded aged pine bark and 1 part peat moss or coir cocoa fiber.

### Ulaymore: ~ Download PDF Growing Citrus: The Essential Gardener's Guide [GROWING CITRUS] [Hardcover], by Martin Page

Review photos of citrus foliage with nutrient deficiencies at.

### Article Category

Acts as a basic introduction to varieties of citrus as well as a historical overview, before turning to the practical matters of soil composition, nutrition, pests, and diseases.

### Article Category

If coir is used in the potting media, an application of agricultural gypsum calcium sulfate will be replace the heavy sodium ions with calcium ion, and help flush out other toxins that often are found in coir.

### How to Grow Citrus

The lemon and the lime are flourishing. For control of additional Citrus Pests, such as scales, whiteflies, leafminers, mites, and mealybugs, please see.

### **Growing Citrus in Planters: Oranges, Lemons, Limes**

Found the pests and diseases section to be lacking - there is a pretty good list and description of many but fine points of identification and treatment are superficial at best. However, the bacteria is harmless to humans.

### **Growing Citrus: The Essential Gardener's Guide by Martin Page**

Before the final move inside, examine for insects and hose off dusty foliage. One major problem is Citrus Greening disease.
