Ethical Principles in the Conduct of Research with Human Participants

Research governance The National Statement should be seen in the broader context of overall governance of research.

Guiding Principles for Ethical Research

We know about some of the unconscionable violations of human rights that have been perpetrated in the name of research, and it is reasonable to assume that many more violations remain unknown.

Ethical Principles

Information requested in the application form is required for the Human Participant Research Committee HPRC to conduct the ethical review of your research study.

Ethical Principles in the Conduct of Research with Human Participants

For example, people with cancer may be willing to accept research risks such as treatment side-effects that would be unacceptable to well people. Human beings have a deep need to be treated in accordance with such justice, which includes distributive justice and procedural justice. The section also describes other processes of research governance that must be in place if the ethical review of research is to be undertaken well.

APA Ethical Guidelines for Research with Human Participants

The continued promotion of ethically good human research — the purpose of this National Statement — will help to maintain these standards. Similarly, circumstances may change during the course of an ongoing study. Undue influence, by contrast, occurs through an offer of an excessive, unwarranted, inappropriate or improper reward or other overture in order to obtain compliance.

Ethics of Research with Human Subjects

This range of possibilities can give rise to important and sometimes difficult ethical questions about research participation. Effective research ethics review incorporates appropriate expertise related to relevant methods or areas of practice.

The Belmont Report. Ethical principles and guidelines for the protection of human subjects of research

The Research Code sets down the broad principles of responsible and accountable research practice, and identifies the responsibilities of institutions and researchers in areas such as data and record management, publication of findings, authorship, conflict of interest, supervision of students and research trainees, and the handling of allegations of research misconduct.
