### Joshua Tree

Joshua trees usually do not branch until after they bloom though branching may also occur if the growing tip is destroyed by the yucca-boring , and they do not bloom every year. The moth is commonly called the Yucca Moth. A more common lifespan is about 150 years.

### Planting tips for Joshua Trees

The are dark green, linear, bayonet-shaped, 15—35 cm long, and 7—15 mm broad at the base, tapering to a sharp point; they are borne in a dense spiral arrangement at the apex of the stems. Most campsites are equipped with fire grates for cooking, though you're welcome to bring a camp stove. This treatment can be especially beneficial if a particularly hot and windy period follows transplanting.
