### The Ethical Considerations

Despite the fact that athletes found guilty of doping are condemned as cheats and punished, however, the feats that drugs enable them to achieve are sometimes impressive. For instance, they contend, those with enhancements may lack empathy and compassion for those who have not chosen or cannot afford these new technologies. Indefinite life extension, far from burdening people with a choice between boredom and a disjointed existence, could represent a great opportunity for those willing to embrace this new way of thinking about their lives and what they can reasonably hope to achieve within them.

### Bruce Bohle (ed.), Human Life: Controversies and Concerns

In contrast with his brother Aldous, Julian Huxley was a scientific optimist who believed that new technologies would offer people amazing opportunities for self-improvement and growth, including the ability to direct our evolution as a species. As long as it has not been implanted in the womb and it is still a frozen fertilized egg, it does not have the status of an embryo at all and there is no prohibition to destroy it. One of the teachings of the Qur'an states that 'Whosoever saves the life of one, it shall be if he saves the life of humankind' 5:32, it is this teaching that makes stem cell research acceptable in the Muslim faith because of its promise of potential medical breakthrough.

### Stem cell controversy

Generally speaking, the greater the extent to which some good is positional, the less reason there is for society to promote that good.
