A preliminary investigation for the assessment of geothermal potential at Eastern Peninsular India

They went further in also calculating the theoretical and technical potential power and the economic potential for EGS. Assessment of the Enhanced geothermal system resource base of the United States.

Preliminary investigation on temperature, chemistry and isotopes of mine water pumped in Bytom geological basin (USCB Poland) as a potential geothermal energy source

Atkins carried out an assessment based on economic considerations and concluded that for the same high heat producing granites the current development potential was only 170 MW e, which could tentatively rise to 1. Accuracy is not guaranteed, and the information contained or linked on this website should not be relied on except as general information. These values act as guidelines to project costs from renewable and appraise them against the savings through mitigating CO₂ emissions.

Preliminary assessment of the geothermal potential at the Papago Farms, Papago Indian Reservation, Arizona

Depth of the basement was derived from the spectral analysis of the gravity data Singh et al.

Client's Guide to Geoenvironmental Risk Assessment (Desk Studies)

The theoretical and technical potential power has been calculated from the available heat in place. Westaway and Younger have indicated that the lack of consistent palaeoclimate corrections, has led to an under estimation of UK heat flow and, therefore, an under estimation of geothermal resources at depth.

Assessment of the resource base for engineered geothermal systems in Great Britain

The SI of water samples were calculated using PHREEQC Parkhurst and Appelo software package using the wateq4f thermodynamic database.

Preliminary assessment of the geothermal potential at the Papago Farms, Papago Indian Reservation, Arizona

In: Proceedings world geothermal congress, Bali; 2010.

Preliminary assessment of the geothermal potential at the Papago Farms, Papago Indian Reservation, Arizona

These folds comprise distinct quartzite bands interbedded with phyllites and bounded by upper and lower phyllite units Srivastava and Sengupta ; Thiagarajan and Banerjee ; Sarkar and Basu Mallick.
