Wind turbine payback period claimed to be within 8 months

I have never experienced it at any easily noticeable level.

NRG Systems

Another important source of degradation for turbine blades is lightning damage, which over the course of a normal 25-year lifetime is expected to experience a number of lightning strikes throughout its service. Where to install a wind farm? Fixed speed systems may however suffer excessive mechanical stresses. At issue is the amount of power which can be collected from the wind, at what cost, and with what reliability.

Wind Energy's Carbon Footprint

They also estimate the time and cost required to complete projects and look for ways to make production processes more efficient. It is obvious why subsidies are required for wind turbines.

Wind Energy's Carbon Footprint

If so, they must drive to the wind farm's parts storage facility and pick up a new component or have another worker deliver it to the turbine site.

Are there any risks associated with the production of wind energy?

See also Cut-in wind speed. They keep having massive meltdowns, so that more and more safety precautions must be installed — increasing the cost still more.
