## List of North American Mammals

US Fish and Wildlife Service.

## What Animals Live In South America?

The most attractive characteristic of Luna moths is its broad, bright green colored wings. It can be identified by its wings, which feature orange-ringed black circular eyespots. Few species live throughout the entire West Coast, however, there are some, including the that inhabits both the Alaskan and the.

## 15 Must See Unique Wild Animals of South America

Still, gators—who prefer freshwater marshes and swamps, but can also thrive in the brackish Glades—are the more plentiful species. Both fore and hind wings of Luna moths feature beautiful eyespots. Dusky gopher frog not pictured.

## List of mammals of North America

THE PHOTO TIP: To best capture a soaring bird in flight, use an SLR camera and set it to continuous focus. In North America, the mountain lion is found in British Columbia and South Alberta in Canada, California, Texas, east of the Mississippi river, Florida, and Washington in the United States.

## U.S. Fish and Wildlife Service

Seven features make the North American model distinct. The United States is generally accepted as one of the of illegal wildlife and wildlife products worldwide.
