

Horizontal gradient of the enhanced isostatic gravity anomaly map of Canada

Geological Survey of Canada - USGS: USGS Geoscience Data Catalog: maps and atlases

Description: -

-Horizontal gradient of the enhanced isostatic gravity anomaly map of Canada

-Horizontal gradient of the enhanced isostatic gravity anomaly map of Canada

Notes: 11

An interpretation of the aeromagnetic and gravity data and derivative maps of the Craig and Dixon Entrance 1

The map compilation presents new polygon, line, and point vector data for the Death Valley area. A depth to basement map of the Death Valley groundwater model area was prepared using over 40,000 gravity stations as part of an interagency effort by the U.S. Geological Survey. These corrections and adjustments are explained in greater detail in Blakely 1995.

Gravity investigation of the Cameroon Volcanic Line in Adamawa region: Geothermal features and structural control

Bottom panels show the T_e recovered using the sediment thickness and sum gravity anomaly data for different levels of noise in the sediment thickness and gravity anomaly data.

Deep crustal architecture of the eastern limit of the West African Craton: Ougarta Range and Western Algerian Sahara

Report discusses rock sample density and magnetic properties, but data are buried in PDF tables. Geological Survey of Canada The paper version of The geology of the Challis 1°x2° quadrangle, was compiled by Fred Fisher, Dave McIntyre and Kate Johnson in 1992.

Gravity anomaly maps of the Arctic (free

The Complete Bouguer Anomaly (CBA) for each measurement was calculated using edited digital elevation data acquired from the Department of Defense to remove the effects of topographic relief. A regional profile on the Utah-Nevada State line reveals a deeply penetrating, broad electrical conductor suggesting the southwestern limit of intact Archean crust is farther north than previously reported with implications for future mineral exploration.
