### Earth and Space: Photographs from the Archives of NASA by Nirmala Nataraj

Max is likely unaware that as we ride Earth, he and I zip along beneath the Moon faster than the planes flying over our heads. The lowest layer of the atmosphere is known as the troposphere, which is constantly in motion and why we have weather. While we were there, I decided to go and look in this moraine close to the nunatak to see if I could find any micrometeorites.

### Quanta Magazine

When a full Moon rises at the horizon, you can almost feel the motion of our horizon with respect to the Moon; that's 1 448 kph or 900 mph at our latitude.

### Earth and Space

The leading explanation for is that a giant impact knocked the raw ingredients for the moon off the primitive, molten Earth and into orbit. How did you get interested in geology? Earth's rotation - Observe how Day and Night on Earth are formed 6.

### Earth Facts ☐

Above the mantle, Earth has. Imagine what is to come with more time, better imagining, and improved hardware to go the distance. Earth gets warmer toward its core.

### Quanta Magazine

It takes 365 days one year for the Earth to complete one full orbit.
