Ideal as a text for graduate courses on multilevel, longitudinal, latent variable modeling, multivariate statistics, or advanced quantitative techniques taught in psychology, business, education, health, and sociology, this book's practical approach also appeals to researchers. Thus, in our next step in model building, we will add negative emotionality as a Level Two predictor to Model C. Plot b shows that mean negative affect is also right-skewed although not as smoothly decreasing in frequency , with range 12 to 23.

The data is presented to the right. We may also have reason to believe that the relationship between time to speak and the response language might differ for each individual, in addition to the baseline differences. Although these plots will contain dependent points, since each musician provides

data for up to 15 performances, general patterns exhibited in these plots tend to be real.
