Evaluating Medical Decision

The third step is to consider the patient's values and culture; these can weigh heavily on his or her decision and may cause some physicians to question capacity. Better utilization of existing capacity can be accomplished through improvements in OEE.

The Capacity Decision System

Ten myths about decisionmaking capacity.

The Capacity Decision System

If the patient is unable to give consent and identifying a surrogate decision maker will result in a delay that might increase the risk of death or serious harm, physicians can provide emergency care without formal consent. CASE DISCUSSION Case 1 is an example of a patient who may understand her situation and treatment options, but may not appreciate the consequences of her decision. Therefore, if the evaluation indicates that the patient's understanding and rationale are adequate, that generally establishes capacity, even though someone else in the patient's situation might make a different decision.
