A Look at How China Controls Its Population

Economic reforms initiated in the late 1970s fundamentally altered methods of providing health care; the collective medical care system has been gradually replaced by a more individual-oriented approach. They also reveal a steep decline in the average annual population growth rate, down to 0. In many rural areas and even some urban ones, couples can pay a fee to the local government and receive a permit to have a second, third or even fourth child.

Chinese Ethnic Groups: Han People and 55 Ethnic Minorities

Population of China according to ethnic group in censuses 1953—2010 Ethnic group Language family 1953 % 1964 % 1982 % 1990 % 2000 % 2010 % 547,283,057 93.

Population by Country (2021)

According to Chinese government statistics, the crude birth rate followed five distinct patterns from 1949 to 1982.

Population by Country (2021)

The population rose and fell accordingly, but by the mid 1970s, it had leveled off, and China had a quarter of the world's people living on just 7 percent of world's arable land. Just over 1,000 survive in the wild, most of them to be found in Sichuan Province. As of November 2019, China's population stood at 1.
