Conifer

Portland, OR: Timber Press: Chapter 9. Abstract The objective of this study was to correlate the occurrence of particular root and woody stump surface components with the ability of spores of the root rot fungus *Heterobasidion annosum* to adhere, germinate and establish on conifer tissues. Decaying roots have important positive functions the same as any other buried woody materials, with the added advantage that they are somewhat protected from loss due to fire.

The development of symmetry, rigidity and anchorage in the structural root system of conifers on JSTOR

Fresh wooden discs from stumps of 20 year old *Picea abies* L. Junipers also provide an extremely wide selection of shapes and colours to tempt a gardener. Over 90% of the pine trees died.

Conifer establishment and root architectural responses to forest floor heterogeneity in an old

Tree removal is often the only answer and the should be ground to prevent the continued growth of roots. Remember, not all buds contain tiny leaves.

CONIFERS: Predicting Stand Dynamics

Initial growth in wood causes a stain that varies in colour depending on host tree species.
