Berry, under the direction of Robert M. Spence 1907-1967 , who would go on to become Hull's protege, was one of the most significant learning theorists of the 20th century, and owed much of his scientific reputation to having developed a theory of discrimination learning that stood up against Kohler's challenges.

Hobhouse described in his book *Mind in Evolution* 1901. Of course, since that time much more has been learned, such as the abilities of chimpanzees to learn sign language and the way they behave in the wild, but this was the beginning. Similarly, his primates' demonstrated problem-solving ability was not linked to complex cognitive processes, but rather the fact that they perceived the world articulately.

**Introduction to Mentality of Apes**

Psychology, a very young discipline at the time, had turned to dogs Pavlov and cats Thorndike and would later, when not looking at humans, become enamoured with pigeons and rats. In them, either Watson himself or a monkey modeled some behavior another monkey had to imitate. His field within science was mere decades old, and therefore should not and could not be limited by a push to conserve as few theories as possible.
