Her ability to reach out to science-shy students led to the writing of her first text, *Inquiry into Life*, which is now in its fifteenth edition. Landscape ecology has emerged as a science to investigate the interactions between natural and anthropogenic landscapes and ecological processes across a wide range of scales and systems: from the effects of habitat or resource distributions on the individual movements, gene flow, and population dynamics of plants and animals; to the human alteration of landscapes affecting the structure of biological communities and the functioning of entire ecosystems; to the sustainable management of natural resources and the ecosystem goods and services upon which society depends. It was prepared to provide non-science majors with a fundamental understanding of the science of biology.
