Methodology

In order to offer standard rules and codes for ex-post harmonization taking these issues into account, this paper presents a generalized framework for the classification of education in surveys.

ERIC

Given these national variables are usually not standardized within countries across surveys, this process is rather complex and introduces new errors. These codes are thus ordered and can be regarded as sub-levels. In order to support researchers, data harmonization projects and data producers with the task of education harmonization, this paper described a generalized coding framework for ex-post harmonization of educational attainment variables in surveys, called GISCED.

Vocational education and training statistics

The transition between programmes at tertiary level is, however, not always clearly distinguished and it may be possible to combine programmes and transfer credits from one programme to another. Classification The is the basis for international education statistics, describing different levels of education; it was first developed in 1976 by UNESCO and revised in 1997 and again in 2011. Appendix B 12 pages suggests the type of questionnaire and instructions that national statistical offices might wish to send to parent agencies which organize programs of nonformal adult education.

National Qualifications Framework

This will enable governments to better assess their human capital resources. In a similar vein, we may not know whether a qualification or program gives access to a higher level of education or not—or a response category mixes these different categories.

By contrast, women accounted for a majority of the tertiary education teaching staff in Romania 51. Figure 8: Financial aid from government to households and students as a share of total public expenditure on education, 2017 % Source: Eurostat Student fees and financial support can play an important role in encouraging or discouraging access to tertiary education. The UIS collects the total number of students enrolled in tertiary-level education programmes in a given country.

Methodology

Literacy data are updated every two years in September to mark International Literacy Day 8 September each year. The known as ET 2020 , was adopted by the Council in May 2009.
