## Probability Report

This brilliant, experimental work by Grand Master Brian W. You're not missing anything by skipping this one.

## Publication: Report on Probability A

On the level of exponents we choose word concatenation, which is string concatenation denoted by 9 with an intervening blank. .

## Report on Probability A by Brian W. Aldiss

But 95% of text is from the point of view of the other humans.

## Report on Probability A

The book is a difficult read -- page after page of descriptions of, say, the items in the shack that the ex-gardener is living in -- but you can feel Aldiss' intelligence burning through it. On the other side of the Atlantic, W was following the conversation with moderate interest.

## Publication: Report on Probability A

Hence the defined languages can be very complex indeed, every recursively enumerable language  $\Sigma$  can be so generated.
