## Host and virus determinants of picornavirus pathogenesis and tropism

When the virus within the blood fails to gain access to the central nervous organs, and to set up paralysis, it is destroyed by the body, in course of which destruction it undergoes, as a result of the action of the spleen and, perhaps, other organs, diminution of virulence.

## Host and virus determinants of picornavirus pathogenesis and tropism

Future studies should address this hypothesis.

## LOCALIZATION OF THE VIRUS AND PATHOGENESIS OF EPIDEMIC POLIOMYELITIS, The Journal of Experimental Medicine

Ebola virus disease: a review on epidemiology, symptoms, treatment and pathogenesis. Opportunity and risks: an emergency approach. Transplacental and neonatal transmission 6.

## Host and virus determinants of picornavirus pathogenesis and tropism

In 1994, the continents of North and South America were certified to be free of polio, followed by the Western Pacific region including Australia in 2000 WHO, 2000 and the European region in 2002 WHO, 2002.

## Poliomyelitis: Pathogenesis, clinical features, and Laboratory diagnosis

MHC I-dependent antigen presentation is inhibited by poliovirus protein 3A. Enteroviral protease 2A cleaves dystrophin: evidence of cytoskeletal disruption in an acquired cardiomyopathy. The assembly of viral particles is not fully understood.
