Clinical psychology is an applied evolutionary science

Counseling psychology as a field values multiculturalism and social advocacy, often stimulating research in multicultural issues. We have direct awareness only of our senses and therefore knowledge is justified by an appeal to grounds that are 'internal' to the individual knower. For example, the development of an emic—etic instrument such as the CPAI has introduced new dimensions of the personality structure to Western models of psychopathology.

Clinical Psychology

A horizon is a sphere of understanding about the world that arises from the knower's concrete vantage point in history. Leplin 1997 has argued that new scientific theories force revisions in scientific methods or standards to allow their evaluation: The evidence that is appropriate for the acceptance of a new scientific theory is the strongest evidence that can foreseeably be obtained on the assumption that the theory is correct.
