Closing remarks Drug discovery is an extremely complicated process involving scientists from various areas. Atmospheric pressure ionization API methods 11. Metabolite isolation from in vivo samples and generation in bioreactors 18.

Drug metabolism in drug discovery and development

Structural information of the drug-dGSH adducts obtained in LC—MS is used to postulate structures of reactive metabolites formed in the biological systems. Cysteine next fuels the glutathione biosynthesis pathway and produces glutathione in two steps.

Learning Pathways

Some drugs could be inhibitors or inducers of metabolizing enzymes.
