See for a comparison of different packages. Please check it out and let me know if it is useful to you. The most commonly used form of a summary table has at least one column and multiple rows, and is called a two-dimensional summary table.

MEPS summary tables

The dataset has label attributes using the package for column names.

Historical Tables

Now, in our summary table, we need a list of unique colors. Now you'll make summary tables of the data you collected and cleaned! Nesting summary inside the element This complex table shows availability of different types and sizes of accommodation in two separate locations. A table like this is also easy to share with others since it is relatively simple to understand.

Presentation

Overview In this lesson students learn how create their own summary tables from raw data.
