Kidney Transplant Patients Provided With New Hope

And the quality of life for those undergoing this treatment is poor — imagine being hooked up to tubes and having your blood swished around like clothes in a washing machine, for hours, several times a week. In with the disorder, monoclonal in the bone marrow create an that's deposited in the and causes inflammation that impacts the organ's ability to function.

Innovation Renews Hope for Patients with Kidney Disease

Under the proposal, CMS would require certain ESRD facilities and Managing Clinicians to participate in the ETC Model based on their location in randomly selected geographic areas.

New breakthrough brings hope for kidney patients.

The Institute has a global network of medical and health experts working together to address the leading causes of death and disability. Because there is no cure available for ESRD, patients are presented with two treatment options to sustain life, kidney transplantation and dialysis therapies.

NHFKP

We aim to close this gap: enrolling the right people for the right trial is critical for research success and patient health.
