### Part 6: Setting Infection Control Policies, Educating People to Follow the Policies, and Making Sure They Do — Office of the Auditor

A dramatic shift in patient care practices occurred as greater than 65% of surgery cases were operated on in an outpatient setting. VUMC Environment of Care Introduction The Vanderbilt University Medical Center Safety Program is dedicated to continual improvement of health, safety and environmental compliance at this institution. A robust post-approval monitoring program is designed to identify problems early and to develop preventive measures.

### Consequences of Inaction: Importance of Infection Control Practices

In low-resource settings, the ratio of IPC nurse practitioners may be as low as one practitioner per 250 hospital beds or per facility. Similar decreases in the prevalence of antimicrobial resistance were noted for other antimicrobial agents as well. However, some apply equally to any hospital environment.

### SARS

The audit showed an infection rate of 6. All work must be conducted in such a manner as to ensure your safety and the safety of others around you, and to protect the environment.

### Part 6: Setting Infection Control Policies, Educating People to Follow the Policies, and Making Sure They Do — Office of the Auditor

Training of staff in above 3.

### Meeting the Regulatory Requirements for Infection Control in ASCs

ICPs should ensure that they are using the most current guidelines available. Minors are not allowed in the facility.

## **Part 6: Setting Infection Control Policies, Educating People to Follow the Policies, and Making Sure They Do — Office of the Auditor**

STANDARD 3 - Accountability: Infection Control Key Worker ICKW s Standard Statement There is a designated Infection Control Key Worker s with day to day responsibility for Infection Control in the care home. The scope of responsibilities for actions to be taken to accomplish the goals should be included in this plan. Review standards from regulatory agencies e.

### **SARS**

In well-resourced settings this is often one IPC nurse practitioner per 100 hospital beds, but in low-resource settings may be as low as one IPC nurse practitioner per 250 hospital beds. Hospitals administrators and department heads must provide visible support for infection control policies, and must provide the necessary resources for improving use of antimicrobial agents.

### **Meeting the Regulatory Requirements for Infection Control in ASCs**

The completion date of the tests is documented. However, only eight hospital services said they had a bed management policy. He should then report to the occupational health department or officer, with the needle and syringe that caused the accident.
