The most well-known embedded application could be the which uses Python for its computing. This function will be maximally overfit. Advantages Disadvantages High-level languages are user-friendly A high-level language has to be translated into the machine language by a translator, which takes up time They are similar to English and use English vocabulary and well-known symbols The object code generated by a translator might be inefficient compared to an equivalent assembly language program They are easier to learn They are easier to maintain They are problem-oriented

rather than 'machine'-based A program written in a high-level language can be translated into many machine languages and can run on any computer for which there exists an appropriate translator The language is independent of the machine on which it is used i.
