

# The separatin and identification of antigenic components of staphylococcal culture filtrates.

-- Purification of an antigen characteristic for *Mycena galopus*

Description: -

-The separatin and identification of antigenic components of staphylococcal culture filtrates.

- The separatin and identification of antigenic components of staphylococcal culture filtrates.

Notes: Thesis (PhD) - University of Toronto, 1941

## **Mycobacterium tuberculosis pellicles express unique proteins recognized by the host humoral response**

The expectation value is the number of matches with equal or better scores that are expected to occur by chance alone. The antigenic pellicle-specific protein Rv0097 was found to have very high sequence conservation within the MTB complex but not with related mycobacteria, while FabG4 was highly conserved in all mycobacteria analyzed.

## **Variability of *Alternaria alternata*: Biochemical and immunological characteristics of culture filtrates from seven isolates**

The identification of humoral antigens for development as diagnostic biomarkers is advantageous because it allows for a variety of rapid diagnostic tests to be performed on easily isolated serum.

## **The separation and identification by monoclonal antibodies of dog IgG fractions**

Polysaccharides in culture filtrates from 3 of the 7 isolates contained glucose, mannose, xylose, galactose, and a fifth, unidentified sugar.

## **Variability of *Alternaria alternata*: Biochemical and immunological characteristics of culture filtrates from seven isolates**

Molecular analysis of genetic differences between *Mycobacterium bovis* BCG and virulent. Previously, our group used classic immunoproteomic techniques to show *Staphylococcus aureus* in vitro biofilms stably express a distinct set of proteins Brady et al.
