Snow

Stokes 1994-01-01 We studied three systems for thinning pine plantations and naturally-regenerated stands on the Stanislaus National Forest, California. YELLOW POPLAR-SWEETGUM-ASH-ELM-RED MAPLE This bottomland mixed hardwood type occurs on sites that are slowly drained but not subject to standing water. A series of aircraft measurements were made in July, August and November, 1999 over relatively

homogenous conifer forests of varying biomass.

National Forests Of The United States: Significance In Biodiversity Conservation

Burn severity was estimated and, where possible, samples comparable to pre-burn samples were collected. The elevation of an area Elev r is included in the model because data suggest that Northern Goshawks prefer lower elevation sites.

Northern Goshawk *laingi* subspecies (*Accipiter gentilis laingi*): recovery strategy 2018

Both theory and experimental results confirm that the litter layer increases the observed canopy brightness temperature and obscure the soil emission .
