## Synthesis, properties, and biomedical applications of gelatin methacryloyl (GelMA) hydrogels

By application of bacterial and lysosomal markers, the presence of bacteria and phagosomes before and after fusion with lysosomal vesicles steps B—D in Fig. IT naturally is strongly involved in this area.

All of the factors that increase spherical aberration are also especially critical to coma.

This process leads to death of non-adapted bacteria, but several pathogens may survive and persist in phagolysosomes. Environmental tritiated water samples usually need to be decontaminated by distillation for reducing the interference.
