## **Oceanography and Marine Environment in the Basque Country, Volume 70**

The rapid decline of morphologically complex algae and perennial forms is accompanied by a decrease in both epiphytic and epibenthic suspensivores and the loss of numerous associated species of fauna and flora. Against a background of extensive multi-disciplinary oceanographic investigations over a number of years, together with the long-term establishment of a Society and Institute, extensive information is available from studies undertaken in the estuarine and coastal waters of the Basque Country.
