Abstract	Knowledge has become the vital economic resource, especially in the knowledge economy, growth, but also in the political sphere. In other social institutions of modern society, including of course, in governance or the media, the role of knowledge has increased exponentially. In the past, traditional knowledge claims have become the source of many of the social, political and economic problems of our time. The book shows how the new knowledge and technology, that transformed key global industries of the last decades, have changed the way we live and work. It was the information age that made possible the dramatic changes in the world of work and the profound transformation of work. What will the future of knowledge industry look like?
