### Distributed Database vs. Centralized Database

You create public links by specifying the PUBLIC keyword in the link creation statement. When locks are obtained and released is determined by the concurrency control protocol. Software, too, can be adapted to the needs of the specific site.

### Distributed Database Concepts

Current user link A user connects as a global user.

### What is Distributed Database? Characteristics of Distributed Database Management System.

These alternatives can typically meet the scale requirements but then fall short as a transactional database because they were not designed from the ground up to provide true consistency.

### Distributed database

This unparalleled flexibility enables developers to tailor data management in order to optimize applications for speed and persistence. This is sometimes referred to as the fundamental principle of distributed DBMSs.

### Distributed Databases

The main goal of the distributed database is to maximize the performance by distributing data on different network or location.

### Distributed Database Management System

Each site is capable of independently processing user requests that require access to local data that is, each site has some degree of local autonomy and is also capable of processing data stored on other computers in the network. Alternatively, you can use generic connectivity to access non-Oracle Database data stores so long as the non-Oracle Database system supports the ODBC or OLE DB protocols.

## Distributed Database

When you must configure separate authentications for each user to access each network service, security administration can become unwieldy, especially for large systems.
