## Center for International Forestry Research

In honor of this outstanding researcher, the European Journal of Forest Research initiates the series of Ernst Assmann Reviews on Production Ecology and Quantitative Silviculture. The latter assessed the effects of paper mill sludge addition to three different wood ash burners — of these, the grate boiler burn produced the highest levels of Cr, Cu, Ni and Pb from identical mixes, and the CFB boiler produced the least. A full review of heavy metal potential toxicity from ash is given in.

## Forest Ecosystems

At one site, however, radioactivity significantly decreased in all compartments, which Högbom and Nohrstedt 2001 attributed to the synergistic effect of K concentration in the ash with  $^{137}\text{Cs}$  in the humus layer of the soil. Climate change: The IPCC scientific assessment.

## David Forest Archives

Journal Policies Authorship Policy Journal of Forestry credits authorship to those who have made a substantial contribution. Supplementary materials are not essential but are specifically relevant and help readers better understand the work, particularly if available in a format not conducive for a printed outlet.

## Trees, forests and water: Cool insights for a hot world

In all three southern experiments tree growth was variable, but generally increased in ash-treated soils over the 11 years 4—10 per cent increase in wood volume, to a maximum of 1. In contrast, wood ash application to podzols is only effective in enhancing tree growth when nitrogen availability is non-limiting.
