

Thermal Studies in the Lac du Bonnet Batholith at Pinawa, Manitoba.

s.n - Evapotranspiration from a boreal forest drainage basin using an energy balance/eddy correlation technique

Description: -

- Thermal Studies in the Lac du Bonnet Batholith at Pinawa, Manitoba.

- Eighteenth century -- reel 6938, no. 07.

Technical record (Atomic Energy of Canada Ltd) -- 163 Thermal Studies in the Lac du Bonnet Batholith at Pinawa, Manitoba.

Nuclear waste disposal and rock mechanics: contributions of the Underground Research Laboratory (URL), Pinawa, Manitoba, Canada

The maximum horizontal stress in the Alxa area is dominantly oriented in the NNE—SSW direction which is consistent with the direction of the tectonic stress field of northwest China. In addition guidance is being provided to assist in the definition and implementation of URL programs in France, Hungary, Japan and USA.

The Energy Budget of Canadian Shield Subarctic Terrain and Its Impact on Hillslope Hydrological Processes in: Journal of Hydrometeorology Volume 3 Issue 2 (2002)

However, in drier years, when ponded snowmelt water is minimal, evaporation is small and sensible heat dominates the early summer energy budget to a much larger degree than is observed elsewhere in the subarctic.

Fire Extinguisher Inspections and Recharging Winnipeg

The 2000 snowmelt was more subdued and created conditions in which the bedrock and soils remained dry and warmed more, augmenting ground and sensible heat fluxes. Group 1 showed an increasing trend with some delayed responses to SWI and an ion-exchange dominant process.

The Effects of Temperature And Pressure On the Mechanical Properties of Lac Du Bonnet Grey Granite

With each new project the team learns to work together.

Nuclear waste disposal and rock mechanics: contributions of the Underground Research Laboratory (URL), Pinawa, Manitoba, Canada

These types of experiments have helped us with an understanding of the processes governing groundwater flow in the Canadian shield.

MacSphere: Isotopic Studies of the Groundwaters and their Host Rocks and Minerals from the Underground Research Laboratory (URL), Pinawa, Manitoba, Canada

In , K is the thermal conductivity and T is the ground temperature °C at the specified depth z m

The Effects of Temperature And Pressure On the Mechanical Properties of Lac Du Bonnet Grey Granite

Black spruce BS and mixed stands MW are scattered throughout the site. In many cases, the behaviour of the rock mass must be monitored over a long time frame and hence instruments must have a life of many years without any degradation or failure.
