

# Investigation into the use of side-arm control for civil rotorcraft applications

National Research Council Canada, Institute for Aerospace Research - NTSB HQ Probes Fly

Description: -

-  
Rotary wing aircraft  
Helicopter simulation  
Helicopter control investigation into the use of side-arm control for civil rotorcraft applications

-  
Aeronautical note -- IAR-AN-67 investigation into the use of side-arm control for civil rotorcraft applications  
Notes: Includes bibliographical references: p. 14.  
This edition was published in 1990

Filesize: 61.52 MB

## Rotorcraft

Although it could be technically possible to certify a rotorcraft under 7000 lbs in the transport category, this is not historically done. In recent years, swarming robots and aircraft have been a subject of much interest; however, many research projects make impractical assumptions such as point mass dynamics with no aerodynamic effects for aircraft models, and most works stop short of fully validating their methods via flight testing. Finally the pressure distribution over the body is locally calculated and then collected by the first processor, which performs the force coefficient computation.

## Army researchers look to reduce rotorcraft noise

Prerequisite: Admission to a professional engineering or science program

## ch9

Upgraded equipment and instrumentation were added to the NASA YO-3A aircraft, but the basic measurement procedures remained similar to those of the earlier test programs. He is married and has three children.

## University of Glasgow

Note that the static weight times the g-factor equals the dynamic force.

## NTSB HQ Probes Fly

Smith BSc, PhD, CEng, FIET, FCQI, HonFSaRS MIGEM, in , 2017 26. .
