This locomotive was displayed at of 1851. HYB-UV: This IR reflective coating is used to dramatically increase the efficiency and temperature of your forge or furnace.

GrafTech

He claimed that his system effected the utilisation of slack or small coal, without the production of smoke; that it enabled fuel and air to be fed automatically in proper proportions, thereby securing perfect combustion; that it gave heat of the highest intensities with regularity of temperature and quality; that it reduced wear and tear, secured the elimination of phosphorus and sulphur, and facilitated fettling.

Crampton's Market fresh local organic produce

The hollow cone is made smaller in diameter directly at the top than at a slight distance below the top, to counteract any tendency that might arise for the glass or glass-making materials to spillover at the rim. As a result, I also greatly reduce the depth of the glass measured normal to its free surface , and thus reduce the distance which the entrained bubbles of gas must travel 1 in order to escape from the glass. If desired, particularly in cutting clay, all or part of the waste water, before mixing with the debris, may be caused to lubricate, so as to keep out all dirt from the bearings, and pass over the surfaces of the cutter to their cutting edges, mixing with the debris as cut, and generally preventing the accumulation of debris on the machine.
