## Gun turret

They are seen as incapable of independent movement, but can open each side of their chassis their 'arms' horizontally in order to reveal twin double-barreled machine guns. Below the gunhouse there may be a working chamber, where ammunition is handled, and the main trunk, which accommodates the and hoists that bring ammunition up from the below. To overcome this problem, the Overstrand was fitted with an enclosed and powered , mounting a single.

## Turret Colorado
