## The Impact of Rural to Urban Migration

Countries such as Japan and Korea that rapidly urbanized in the last century also saw a major agricultural reform alongside urbanization and industrialization. And in the current economic environment it is a necessary step to come out of the crisis strong and with new energy for better growth. Federal and state agencies, membership organizations, and foundations are working to reduce these disparities and improve the health and overall well-being of rural Americans.

## Characteristics of Rural and Urban Community

The downsides of concentration—congestion, pollution, and possibly slums and urban squalor, will need to be managed to assure continued economic benefits. How does rural life expectancy compare to urban? Indeed, three quarters of the poor live in rural areas.

## Characteristics of Rural and Urban Community

The brief found that rural residents are more likely to be unemployed, have less post-secondary education, and have lower median household incomes compared to urban residents. Characteristics Urban Community Urban community is an area which is developed and civilized, based on geographical conditions.

## Urbanization and Urban

FORHP focuses on matters affecting rural hospitals and healthcare, coordinates activities within the department relating to rural healthcare, maintains a national information clearinghouse, and provides rural-specific grant programs to address many of the disparities affecting rural health.

## Urbanization and Urban

Indeed, few countries become high income without high levels of urbanization. Excess deaths are those that may have been potentially preventable. Getting urbanization and rural development right is essentially about sharing prosperity.

## **Rural Health Disparities Introduction**

Every state has a state office of minority health or health equity office charged with reducing health disparities within their state, providing state-level health information and resources targeted toward minority populations. The added benefit of connecting smaller cities is that migrants need not move to large cities to find jobs; instead they can find work in smaller cities closer their hometown. What agencies and organizations are working to seek solutions to these disparities? We at the World Bank Group have two goals: The first is to end extreme poverty by 2030.
