In his treatment, standard von Neumann-Morgenstern-Nash game-theoretic equilibria become Uses the fairly recently-developed 1970's tools of evolutionary game theory specifically evolutionarily stable strategies to study more-realistic economic situations than what we normally learn in Econ 101. . Using recent advances in evolutionary game theory, contract theory, behavioral experiments, and the modeling of dynamic processes, he develops a theory of how economic institutions shape individual behavior, and how institutions evolve due to individual actions, technological change, and chance events.

**Microeconomics: Behavior, Institutions, and Evolution**

Complementing standard mathematical analysis are agent-based computer simulations of complex evolving systems that are available online so that readers can experiment with the models. Samuel Bowles is Research Professor and Director of the Behavioral Sciences Program at the Santa Fe Institute and Professor of Economics at the University of Siena. This is their method of commerce.

Diouf was working temporarily as a delivery man, hoping soon to become a taxi driver. But in light of the thirteen or more millennia that had passed since there had been any sustained contact between people of the Old World and the New, what is striking about his account of Mexico is how familiar it all was.
